

FOREWORD

Traffic records improvement projects have been ongoing to streamline the process of data collection and processing. Current projects such as the Traffic Crash Reporting System (TCRS) Modernization and the Traffic Records Data Linkage strive to improve the quality, timeliness, and accuracy of data outputs.

New technologies, including electronic data collection, additional error checking, quality assurance, and improved crash location data, are continually emerging and improving. By utilizing these technologies as they become available, traffic records quality will continue to improve.
