

10 YEAR TRENDS (continued)

AVERAGE AGE OF DRIVERS IN CRASHES 2004 - 2013

Over the 10-year period, reflecting the demographic trend of increasing age in the general population, the average age of drivers involved in all crashes has increased more than six percent, and the average age of drivers involved in fatal crashes has increased nearly eleven percent. The average age of drivers in HBD crashes has remained relatively flat at age 35.
